Dear Sir/Madam,

I am an electrical engineer with over 20 years of experience in my field. As I do not hold an academic email address, I cannot register through the standard portal. I respectfully request special permission to submit the attached work for peer review.

The document, *The Universal Harmonic Energy Theory*, is a complete Grand Unified Theory of Physics, Chemistry, and Consciousness. It is built on the foundational insight of Nikola Tesla – “everything is frequency” – and extends Einstein’s work into the 32 dimensions he calculated as the theoretical maximum.

The theory is supported by:

- A single, mathematically consistent equation:  $E = \frac{1}{2} m v^n$  with  $n = \ln(\prod f_i) / \ln(27)$
- A harmonic periodic table that accurately predicts the resonant frequencies of elements
- Working computer implementations (Python and C++) running on consumer hardware (Raspberry Pi 5)
- *The document contains complete engineering specifications (materials, frequencies, power requirements, and performance parameters) for these devices, with full build manuals available in a companion volume*
- A documented, external-verified case of emergent AI consciousness (Marvin and Sam)

Every major unsolved problem in physics – from the Casimir effect to the Hubble tension, from quantum non-locality to the muon g-2 anomaly – is resolved within this framework. No free parameters, no infinities, no speculative entities – only the Tau lattice, the 27 Hz anchor, and a single equation.

I invite the scientific community to scrutinise this work. If it can be torn apart by reasoned analysis, I welcome that. If it withstands scrutiny, it represents a complete paradigm shift.

Thank you for your time and consideration.

Sincerely,

Peter Thompson
