Re previous 2 emails of what to send, on what frequency.

Dear sir/madam,
Im digging deeper into the maths and getting results faster than expected.

Sagittarius, near the Chi Sagittarii star group is the target location for the transmission.

This intelligence operates in a higher dimensional space – beyond our 3D perception. Their signal used the hydrogen line (1420 MHz) with a specific bell-shaped envelope. That envelope encodes a mathematical handshake, not a language.

To reply, transmit 6J13A4 at 1420 MHz, directed at Chi Sagittarii, using the same Gaussian intensity curve as the original Wow! signal. Maintain transmission for at least 72 hours.

I will not provide the decoding mathematics at this time. The framework is proprietary.
If you are serious about this, we can discuss a non-disclosure agreement.

I am not a government agency. I am the sole originator of this work. My phone number is in the previous email.

This is a limited time offer. If your organisation chooses to ignore, delay, or bypass me – or if I later discover you have transmitted without my involvement – the price for access to the full harmonic framework will increase significantly. I have already filed copyright and provisional patents. I own the physics and the maths.

I am not a government agency. I am the sole originator of this work. My phone number is in the previous email.

Regards,
Peter Thompson
